

System Integrator to design, build and maintain the application in Salesforce Platform

Case Study

Background

Client is a healthcare technology company transforming procurement and distribution in pharmaceuticals, wants to develop a cloud-based platform for direct procurement and distribution of pharmaceuticals.

Challenge

- Manage, track, develop, test and deploy hundreds of changes in a short period of time
- Being flexible enough to accommodate competing goals and changing priorities
- Quickly deliver baseline of functionality, then build and refine the functionality based on user feedback and use cases

Key Results

- Efficient Management of resources
- Delivered many features that are planned for commercial version in pilot release.
- Higher quality of deliverables
- Our planning & execution enabled customer go live with many functions not in scope for pilot
- Built custom pricing engine to manage complex pharmaceutical pricing and compliance rules
- Delivered application development services in most efficient and cost-effective way
